

North Flemish Pass Basin

The North Flemish Pass Basin is virtually unexplored despite being analogous to the Jeanne D'Arc, with significant source rocks of over 2.5% TOC present in the deeper wells. This is postulated to be equivalent to the prolific Egret formation in the Jeanne D'Arc and is extensively located.

Acquisition Parameters:

Survey Area:	3,000 km
Source Size:	3,000 cu in
Source Depth:	7m
Streamer Length:	6,000m
Streamer Depth:	8m
Record Length:	8 sec
SP Interval:	25m
Fold:	120
